

Control Properties

Editing Controls

To edit a control's properties, click on the control in your form. The Forms Designer's Properties area will display the control's existing properties, so you can edit them.

The screenshot shows the 'PROPERTIES' window for a 'Text' control. It has two tabs: 'Settings' (selected) and 'Style'. The 'Settings' tab contains the following fields and options:

- Label: Text 3
- Control Type: Text (dropdown)
- Name: (empty text box)
- CSS Class: (empty text box)
- Pattern: (empty text box with an information icon)
- Max Length: (empty text box)
- Error Msg: (empty text box)
- Hint: (empty text box)
- Help: (empty text box)
- Placeholder: (empty text box)
- Decorator: Default (dropdown)
- Required:
- Visible:
- Enabled:
- Sensitive:
- Mappable:
- Password:
- Printable:
- Hide Label:

A 'Publish Control Template' link is located at the bottom right of the window.

Controls have [Setting Properties](#) and [Style Properties](#). Generally speaking, Setting properties affects the control's behavior and Style properties affect its appearance.

The specific properties you see depend on the type of control you've selected in your form; some controls have more properties than others.

All properties are optional, with the exception of the control label.
