

Manage Submissions

Live Forms Online tracks the number of submission entries your tenant users create in the Live Forms database. A **Production Submission** and **Total Submission** count is reported.

The **Production Submission** count increments when:

- A user submits a form or completes the final step of a workflow. The form/flow is deployed to production at the time of submission.
 - "Deployed to production" means the

Deploy icon for that form/flow on the [Forms/Flows Home Page](#). was clicked to deploy the form/flow to the Production state and remove the Development watermark. If your form server license enables a limited number of Production forms you will get an error message when you hit your license production form limit.

The **Total Submission** count increments when:

- A user submits a form. The Deployment State of the form can be "Production" or "Development" at the time of submission.
- A user clicks the [Save](#) button on a form/flow.
- A user forwards a workflow step to the next user/role.
- A user submits the final step of a workflow. The Deployment State of the form can be "Production" or "Development" at the time of submission.

You can view the number of **Production and Total Submissions** used each month in your tenant by logging in as the tenant administrator. Click the **Manage Submissions** link on the main tenant management page to view the list.
